

Easy-to-use tool for version control and collaborative developers work in Qlik Sense.

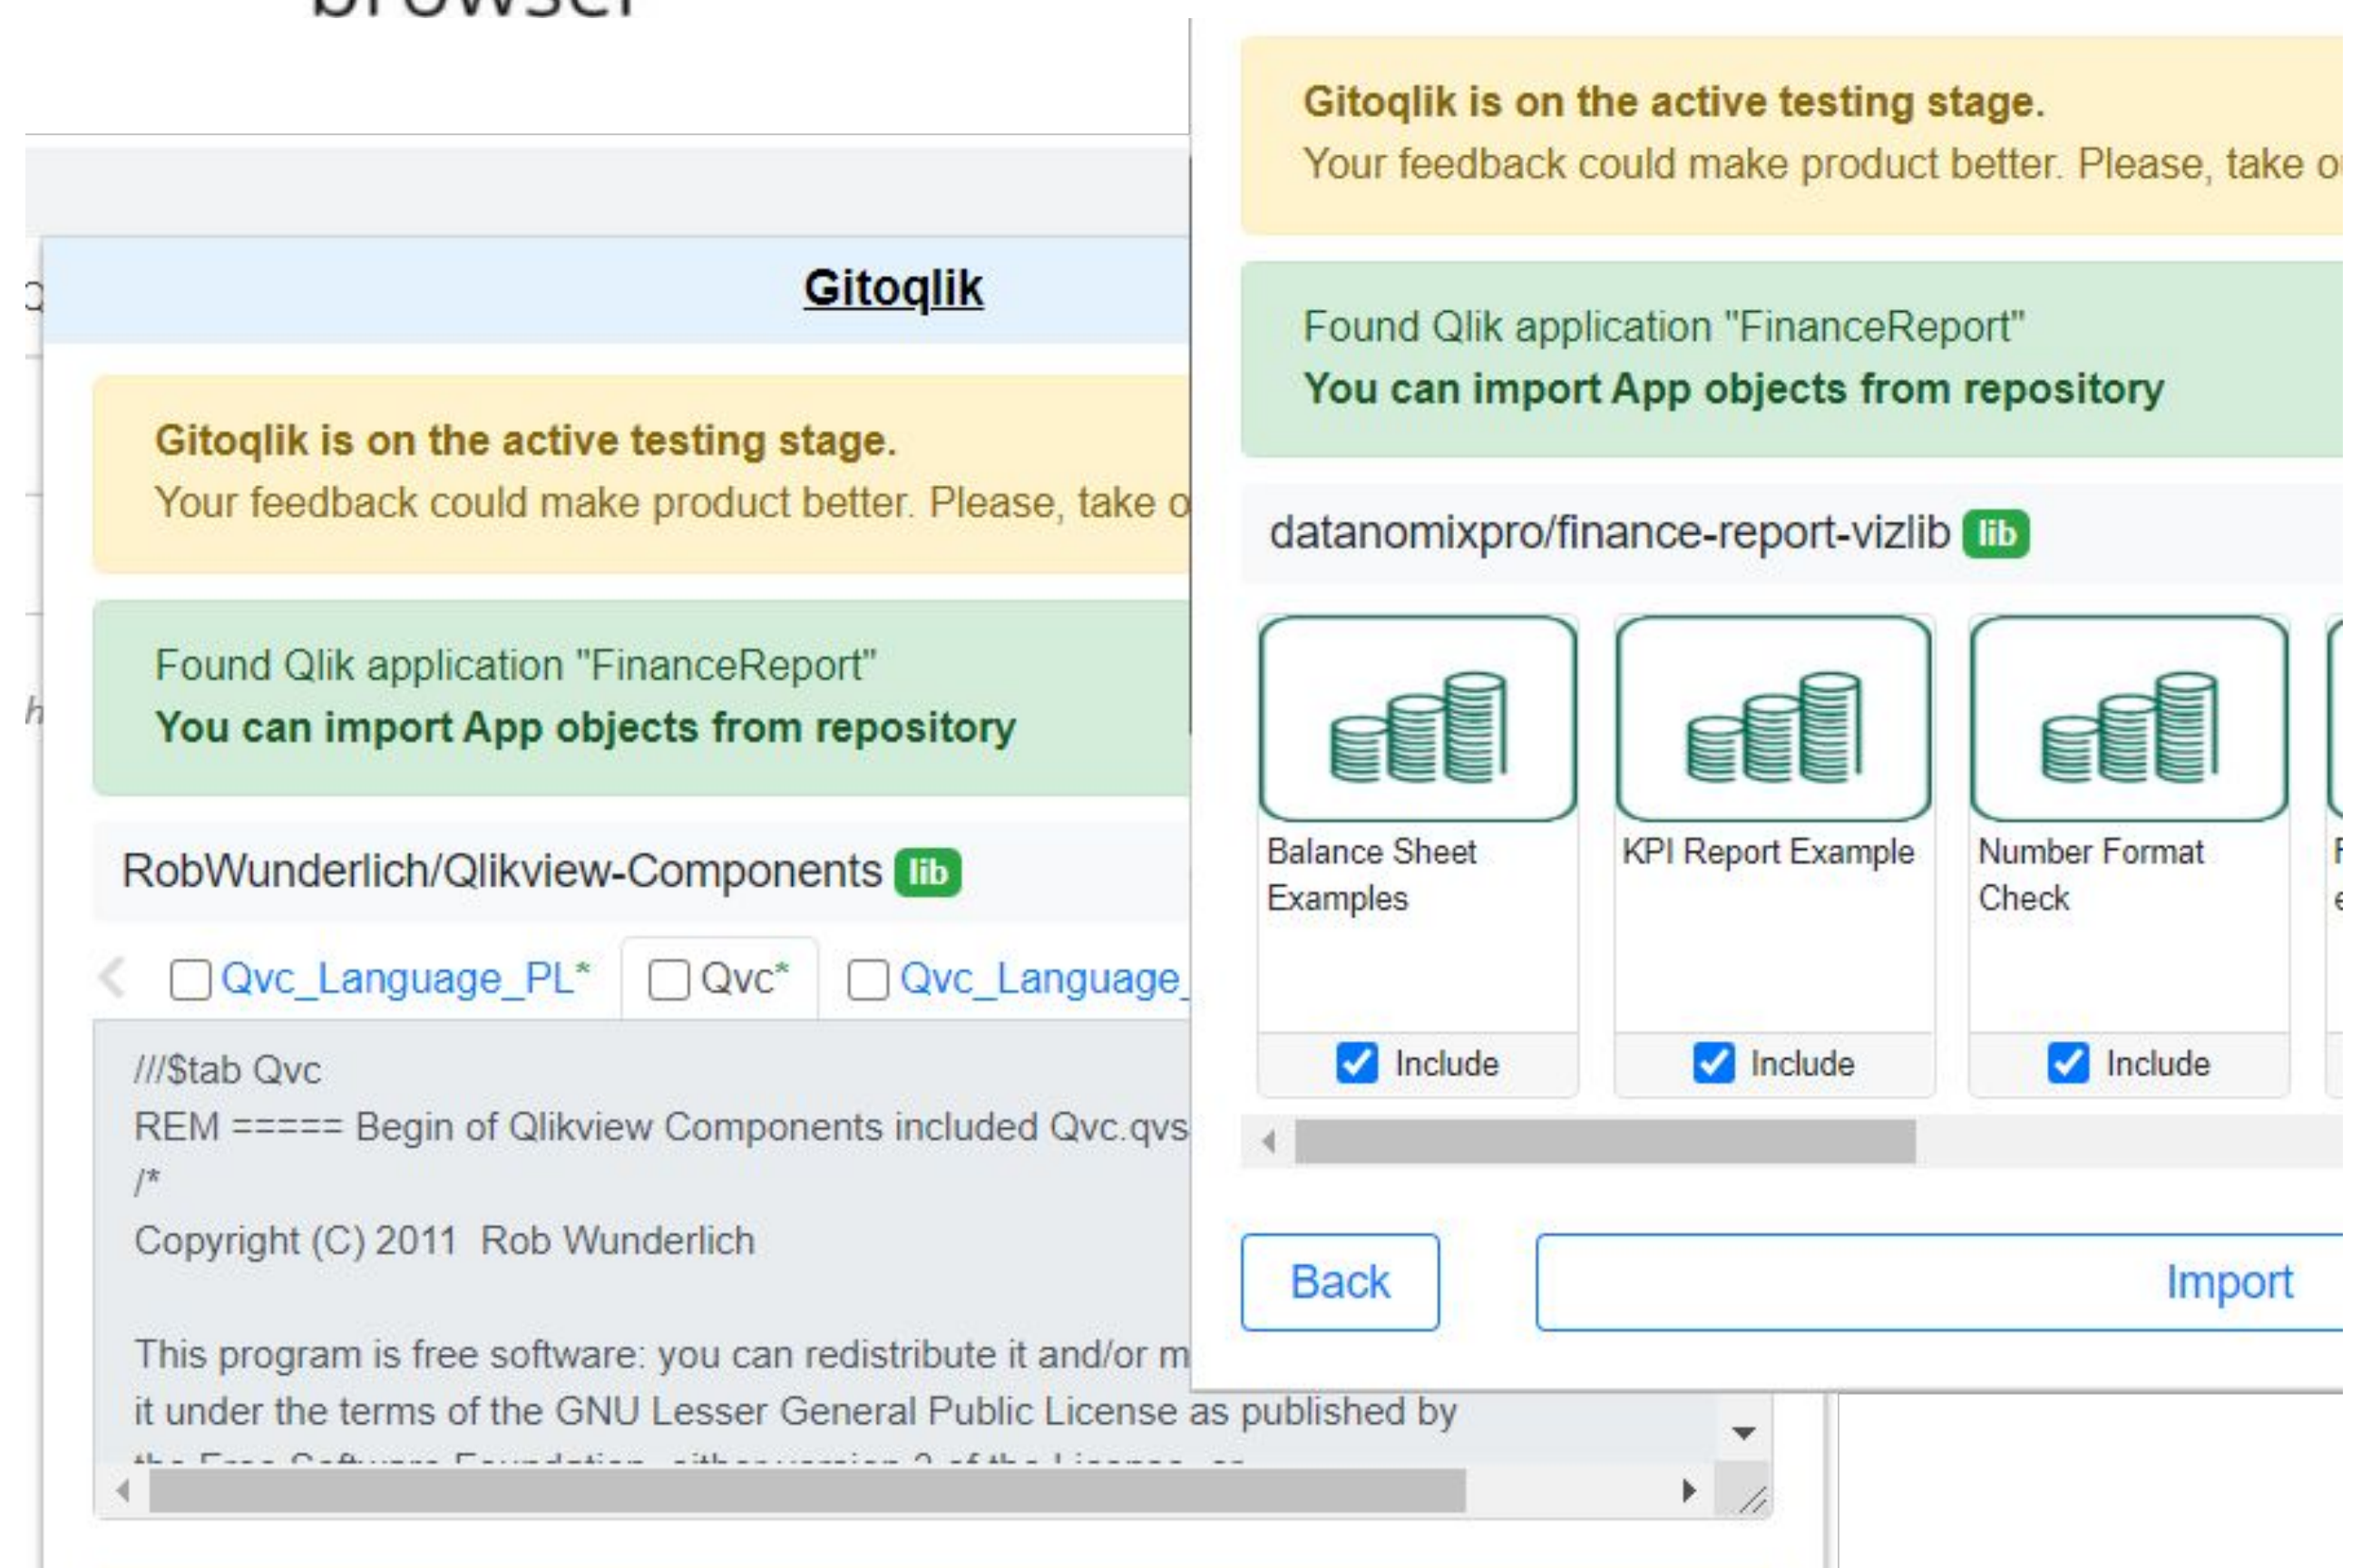

GitOqlok is a Chrome extension that connects Qlik Sense with GitHub, Gitlab, Bitbucket. So, you could revert back to the previous versions of the application and reuse and share your code, master items and visualization objects with Community.

GitOqlok detects developers copies of the app and store that kind of changes in the independent branch.

Forget about the painful snapshots of sheets and uploading images as a thumbnail by hands.

GitOqlok automatically applies the thumbnail of the sheet.

## FREE TO USE

### FEATURES

- Application objects version control.
- Load script version control.
- Import sheets from different applications.
- Git branches support.
- Thumbnail assistance.
- Auto Documentation.

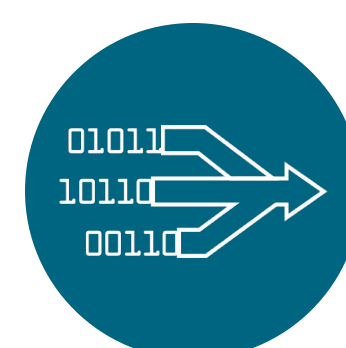

### IMPACT

Fill the gap and bring to the Qlik Ecosystem developers version control that every traditional developers have.
